

NEAXMail AD-40

A Unified Approach
to Message Management

Anytime... Anywhere...

NEC

IMMEDIATE access

Access to information. It's not just a formula for business success, it's the absolute key to survival. The challenge today, however, lies in finding ways to handle the many forms that vital information can take... voice, text, facsimile and more.

How does a company harness technology to successfully access it all—and, once accessed, to deploy it all strategically throughout the organization wherever and whenever it is needed? It is a universal issue that faces companies of all sizes and types. Presenting the NEAXMail AD-40, an exciting new productivity tool with unparalleled features and Unified Messaging capabilities. With its clear, simple message options, your company will stay in touch, not "on hold", and you'll service callers both efficiently and courteously.

Things I've Always WANTED TO DO.

- Have a visual display of voice, text, and fax messages from my PC.
- Record my phone conversation.
- Use voice mail messages as attachments to documents.
- Save voice mail messages as a .WAV file.
- Cancel or update a previously recorded voice mail message.
- Keep a record of all my calls.
- Utilize speed control in message playback.
- Have a special greeting when the phone is busy.
- Create my own message groups.

first class

Unified Messaging and Call Management

The NEAXMail AD-40 Voice Processing System ingeniously integrates four areas of continuous business information generation for establishing the ultimate in universal access and personal productivity environments. These areas include:

- Voice Messaging
- Fax Integration
- E-Mail Integration
- Call Management

By giving individuals complete control over telephone, fax and e-mail messages, NEC provides subscribers with the freedom to access information at any time. Plus, incoming/outgoing calls can be managed in ways that suit individuals best. For example, using Computer Telephone Integration (CTI), call traffic can be "seen" and managed on the PC, extending the limits of the desktop phone. Incoming and outgoing faxes can be received, transmitted and broadcasted from any networked PC. Furthermore, when on the road, employees can use a telephone to hear and respond to e-mail messages—they won't

Experience Live Record

Through the use of digital integration the NEAXMail AD-40 can record a user's conversation directly to their mailbox by simply pressing a button on their phone — or with the optional ViewMail module by clicking an icon. For example, when a secretary or customer service agent receives a phone call containing information that needs to be passed on to another employee, they no longer have to reconstruct the conversation themselves. Instead, at any time during the call they can activate Live Record. Once a call is concluded, the employee can immediately send the recorded conversation to a mail box or employ automatic call back. Live Record prevents the misinterpretation of information and simplifies the entire communications process.

need to access a personal computer. Text-to-speech conversion technology makes this dream a reality. And, through fully customized digital integration, the advanced NEAXMail AD-40 combines these awesome business functions into one comprehensive voice processing system—a system that sharpens your access.

Voice Messaging

Incorporating an intuitive and easy-to-use graphical user interface (GUI), NEAXMail AD-40 enables subscribers to manage inbound and outbound calls and messages on screen, from any networked PC, including faxes and e-mails. Messages are managed with a few mouse clicks. The intuitive interface allows users to Play, Send, Reply, Redirect, Archive and Delete messages instantly and you can rewind, pause and fast forward them during playback. Multimedia equipped PCs can even play and record messages without picking up the telephone.

Fax Integration

Now, there's no longer a need for users to leave their desks, go to the fax machine, dial-up and feed pages. NEAXMail AD-40 manages both inbound and outbound faxes from any networked desktop PC, making fax communications faster, easier and totally confidential. All documents are password-protected and can be stored electronically until previewed and printed. And, using the print-to-fax driver, documents can be instantly faxed to other subscribers, groups or personal databases.

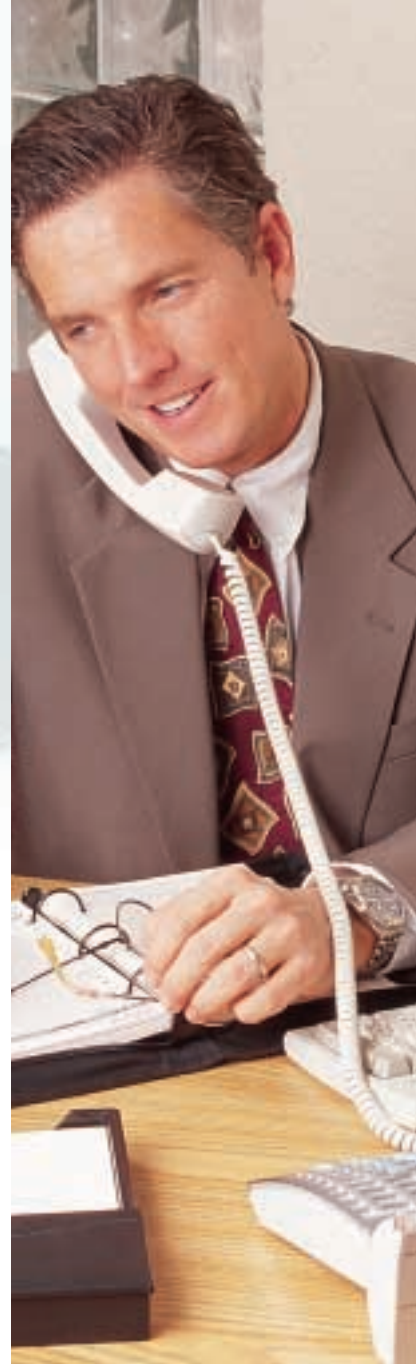

E-Mail Integration

The NEAXMail AD-40 E-Mail Integration package gives users 24-hour, two-way access to their e-mail messages—without the need for a laptop, or modem connection. Messages are as close as the nearest phone or fax machine, and they can be organized and prioritized based

on user-defined characteristics. Plus, with the E-Mail Reader module, subscribers can listen to an e-mail message, using text-to-speech conversion. They can even listen to e-mail attachments.

Call Management

With NEAXMail AD-40 advanced call control features, users can view, answer, make outbound calls, place calls on hold, transfer, conference and screen calls easily and efficiently from their PC — overcoming the limitations of the desktop telephone. Call Management also allows the user to manage multiple calls at the same time and identifies callers before picking up the telephone — allowing the user to prioritize their calls and enhancing productivity. And with the Call Log and Contact Lists, important call data is available immediately.

full digital **INTEGRATION** **THE REVOLUTION STARTS HERE.**

The NEAXMail AD-40 is digitally linked to your NEC telephone system. This customized digital integration provides accurate message taking, reliable message lamp control, and message delivery. It also means the NEAXMail AD-40 is easy to install and maintain. And here's something else you should know. With digital integration, speed and accuracy is a fundamental feature. The NEAXMail AD-40 saves the user time by speeding you through the system, directly connecting you to your mailbox to retrieve messages instead of having to access a main call processing system first. Digital integration ultimately lessens the load on the PBX while simplifying and enhancing the entire voice messaging process.

NEAXMail AD-40

Business Messaging Platform

Telephone Integrations

NEAX®2000 IVS (1300 level software and higher)
