

# Dterm® Handset Cordless

## Extending Your Reach

**P**icture this: The phone call you're on requires that you reach across your immediate office or workstation to refer to a relevant file. Hmm, what to do. If you're like most, you pinch the corded handset between neck and shoulder and roll the chair out toward the file. You immediately feel the threatening tug of a limited length of cord; however, the call is not appropriate for speakerphone, and you don't wish to interrupt the train of thought by putting the caller on hold. You consider laying the handset down on the desk, only for the briefest of moments, but you may miss some of the conversation and that could prove embarrassing.

So, the inevitable occurs: You fumble and drop the handset from its perch, the call is interrupted, and you end up embarrassed anyway. Sound familiar? Of course it does. Well, NEC has a simple, but smart solution that every professional will appreciate. The NEC Dterm Handset Cordless.

### The Next Best Thing to a Cordless Phone

The NEC Dterm Handset Cordless may not be a full cordless phone — with long range reception/transmission capabilities — but it sure is long on flexibility and convenience when it comes to moving around your immediate work space. Based on the popular NEC Dterm Series E 16-Line Deskset, the Dterm Handset Cordless eliminates the cord connecting the handset to the phone. This means you can reach for files, move around freely in your office or cubicle, all without limiting yourself to the frustrating length of a phone cord. It's less expensive than a cordless

or wireless phone, which makes it an ideal solution for circumstances when these applications are more than what you need.

### Featuring All the Dterm Features

We may have cut the cord, so to speak, on our Dterm Handset Cordless, but we haven't cut any of the features and functions that have made the Series E such a sought-after hit.

- 16 programmable line keys for immediate line, trunk or feature access
- 2-color LED per key, which immediately indicates call status
- 8 dedicated function keys for ease of operation
- 3 lines of LCD information (adjustable), with 24 characters per line, displaying more information for more informed decision-making
- Call/message indicator lamp for immediate call response

## Extending Your Reach

The Dterm Handset Cordless offers a veritable "toolbox" of menu-driven, soft-key functions — each delivering power, versatility and programability to every station user. Convenient personalization functions include: off-hook ring on/off, mute on/off and microphone on/off. Add all of this, then subtract one coiled cord, and you've got the Dterm Handset Cordless — freeing the power of your NEC Communications System to extend your reach even further.

Handset Buttons and Switches

- |                 |                                       |            |   |
|-----------------|---------------------------------------|------------|---|
| 1. TALK:        | initiate, disconnect and receive call | 6. VOL:    | change speaker volume when in use (Normal/Medium/High/Loud) |
| 2. TRF:         | transfer a call                       |            | change ringer volume when idle (Normal/High)                |
| 3. MUTE:        | disable the handset transmit          | 7. Ringer: | specify ringer ON/OFF Switch                                |
| 4. 0 - 9, *, #: | dial when off-hook                    |            |   |
| 5. CH:          | change the transmitted channel        |            |   |
